

Enterprise AI, Built as an Ecosystem.

AI compounds when it is built as a system.
We design, build, and run those systems, turning
AI from project work into operating leverage.

Why Pixeldust

Pilots are easy. Production is where integration, adoption, data quality, and governance decide whether AI earns its place. We work end to end as one team, so the systems we build run the business instead of sitting beside it.

What we build

01

AI Consulting & Solutions

Where to start. What to build. How to scale.

We help leadership teams identify the highest-leverage AI opportunities, weigh build versus buy, and de-risk the path with proofs of concept that move to production in weeks.

Clarity on what matters.
De-risked path to value.
Outcomes in weeks.

02

AI-Native ERP

The operating core, rebuilt around intelligence.

ERP designed for predictive workflows and modular extension. We migrate cleanly from legacy stacks, integrate payroll and banking, and ship compliance-ready by default.

Adoption at 80-%+.
Manual effort halved.
Errors down 4x.

03

Agentic AI

Agents that do the work, not just describe it.

Agents designed around your workflows, your data, and your decision logic, integrated with the systems your teams already use. Human checkpoints, approval gates, and audit trails throughout. Our managed service keeps them tuned in production, accountable to the KPIs that matter.

Process automation
up to 80%.
4x lift in
lead-to-meeting
conversion.

04

Data Engineering & Migration

Intelligence is only as strong as its foundation.

Pipelines, quality frameworks, ML operations, and AI dashboards, with governance, lineage, and model monitoring built in. We migrate legacy data without losing fidelity, ready for regulated environments.

Reporting in hours,
not days.
Sharper model accuracy.
Audit-ready by design.

05

Product Design & Engineering

Where intelligence meets adoption.

End-to-end product design and engineering for AI-native experiences. UX research that accounts for model behavior. Marketplaces, customer platforms, and internal tools built for accessibility, performance, and security from day one.

Time to market 4x
faster.
Higher user adoption.

Intelligence. End to End.

Start with a conversation.

A 60-minute discovery call.
A proof of concept.
Outcomes you can see before you commit.
